New York, April 6.—The demand for stocks today encountered an amount of offerings that overbore the balances and carried the price movement backwards. The extent of the recent advance evidently was, in itself, a main incentive to much of the selling, which was speculative profit taking in large part. The professional bears were alert to take advantage of the wavering appearance of the market and to help on the decline with short selling and with offering down of prices. Forcigners were disposed to take profits a well as home speculators. The fact that me present week in the stock market will ind on Thursday, added to the disincilization to extend speculative commitments. Tomorrow's government crop report is awaited with keen interest, and it is expected to have an influence on the speculation if any decisive information is given of the spring condition of the winter wheat crop. With wheat and cotton both at top prices for the season, and with reminders not lacking of crop damage to account for this, the stock barket is compelled to take some notice of the subject. The conference on Thursday between the anthracite operators and subject.
